Control Profiles for Cephable

The written content below encapsulates the content in the video. It has been organized and formatted in a way that may not mirror the order in the video, but is simple to follow and comprehend.

1

What are Control Profiles?

- Control Profiles are a summary of the customized input and output settings to interact with your computer in new ways.
- Profiles can vary in complexity, ranging from simple to complex configurations. Some profiles may have 1-2 commands, while others may have many.
- Users can customize & easily switch between them.
- You can view your list of current profiles within your account by either clicking on the dropdown list at the top of the home screen or clicking on the button "Manage Control Profiles" near the bottom of the home screen.

Your Output Device: My Mac
