Using Cephable's Voice Controls & Dictation

Preparing for Voice Controls

Before you start using voice controls, you'll need to enable them in your Cephable Settings.

Select the Settings and Tools button in the Cephable Control Panel.

Scroll down to the Voice Controls section.

Select the Voice Controls button to open the Voice Controls settings.

Select the Voice Controls button to open the Voice Controls settings.

Starting Voice Controls

Start Voice Controls by saying "Start Voice Controls".

Voice Commands

Voice commands are the words you say to control your computer. Cephable comes with a set of default voice commands, but you can also create your own.

Using Voice Commands and Dictation Together

Voice commands and dictation can be used together to create a powerful workflow. For example, you can use voice commands to open a document and then use dictation to write the content.

Voice commands can be used to control your computer, while dictation can be used to write text. You can switch between voice commands and dictation by saying "Voice Commands" or "Dictation".
