

Cephable: Learning Discord

1

What is Discord?

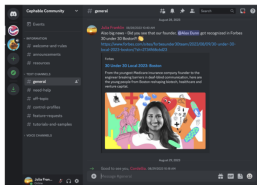

Discord is a free communication app that is available in all the major app stores. You can download it as a mobile app, as a desktop app, or even just open it in your browser. In Discord you can connect with others via voice, video or text.

2

Home Screen

Here is an image of what Discord's home screen looks like in the browser.

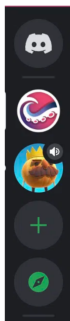

3

Servers

-On the far left side, you will see a list of circular icons that show what servers you have joined. These are basically different spaces on Discord that connect you to different communities and friend groups. In this image, 2 servers are in this account.

-You can add a new server by pressing the green plus icon and searching by category or name of what community you are looking for.

-We included a direct link to our Cephable Community with this tutorial.

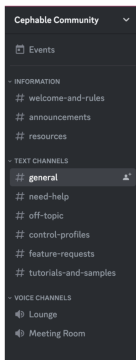

4

Channels

-Make sure you click on the Cephable Logo to view our online community. You will then see a list of all of our channels in the next column.

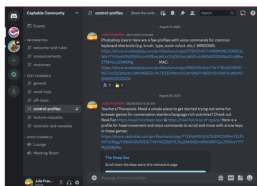

-A channel on Discord is either a text or a voice channel. Each channel is dedicated to a specific topic and may have different rules connected to it. You can do things like post public messages/questions, upload files, share images, or voice chat etc.

5

Channels Continued

For example, click on the channel "control-profiles" You will see that different team members and users post links to control profiles that they use. You can click the links and add them directly to your Cephable account.

6

Now it's Time to Explore!

Explore all the channels and connect with others who use Cephable. You can suggest a feature, ask for help, or come to find out the latest news! Don't forget to wave and say hi!

Thanks for connecting with us!
